6. Strings - Ableton Simpler String Quartett
7. Choir - Virgin Choir VSTi

## Message to jurors:

Just before participating I asked the organizer on the forum about making a cover version and received an [answer](#) that it needs to create an original beat for that. Here it is. I've attached a couple of confirming screenshots as well.

I express my gratitude to Mitya and his Whitepaper, which became a source of inspiration.

This song is recorded from the bottom of my heart. With love to our project. I hope you like it!

## Lyrics:

No human brain makes only correct decisions.

The mass solution doesn't prevent it from being wrong.

Technology must be integral with economy and governance.

No need to trust each other.

This is a new way to program blockchain Apps.

DeBots are completely decentralized by nature.

With such a scalability, speed and security guarantees.

Without a need to trust each other.

All you need is dApp

All you need is dApp

All you need is dApp, dApp

dApp is all you need

Decentralization allows to reach consensus in groups.

It works only when the whole system is decentralized.

This blockchain supports all the decentralized Apps.

It's easy! :)

**Thank you for your time!**
