SUMMARY

This document contains the major technical issues concerning the development of **freeton.bar** site. The Web site was designed and developed for Palantir (Social Media Dashboard) contest held by Free TON Analytics & Support Sub-governance.

OBJECTIVES

The main goal was to develop a Social Media Dashboard for analytics of social networks, chats, traffic, and content engagement of Free TON platforms.

Social media gives projects an unprecedented opportunity to understand the audience, create better content, keep track of competitors and improve their own strategy.

DASHBOARD REQUIREMENTS

1. Collecting analytics by the number of subscribers, likes, shares, and retweets from Free TON social networks and chats. 21
2. Easy to add new social media or platform
3. Online Dashboard Reports (ODR): real-time, daily, weekly, monthly, quarterly, annually
4. Periods comparison (1st week/month vs 2nd week/month, etc)
5. Possibility to download data in PDF format (graphics and metrics)
6. Free TON mentions in the media field (Google alerts)
7. Visualization map (Best platform, more users engagement)

CROSS-BROWSER

Multi-browser tests were run successfully: Firefox, Internet Explorer, Safari and Chrome. Regarding security, the whole website has been properly crawled and all charts and widgets have been checked.

MOBILE VERSION:

A specific version of the website for mobile devices was created so users can view the content in full size, whatever the size of their screens is.
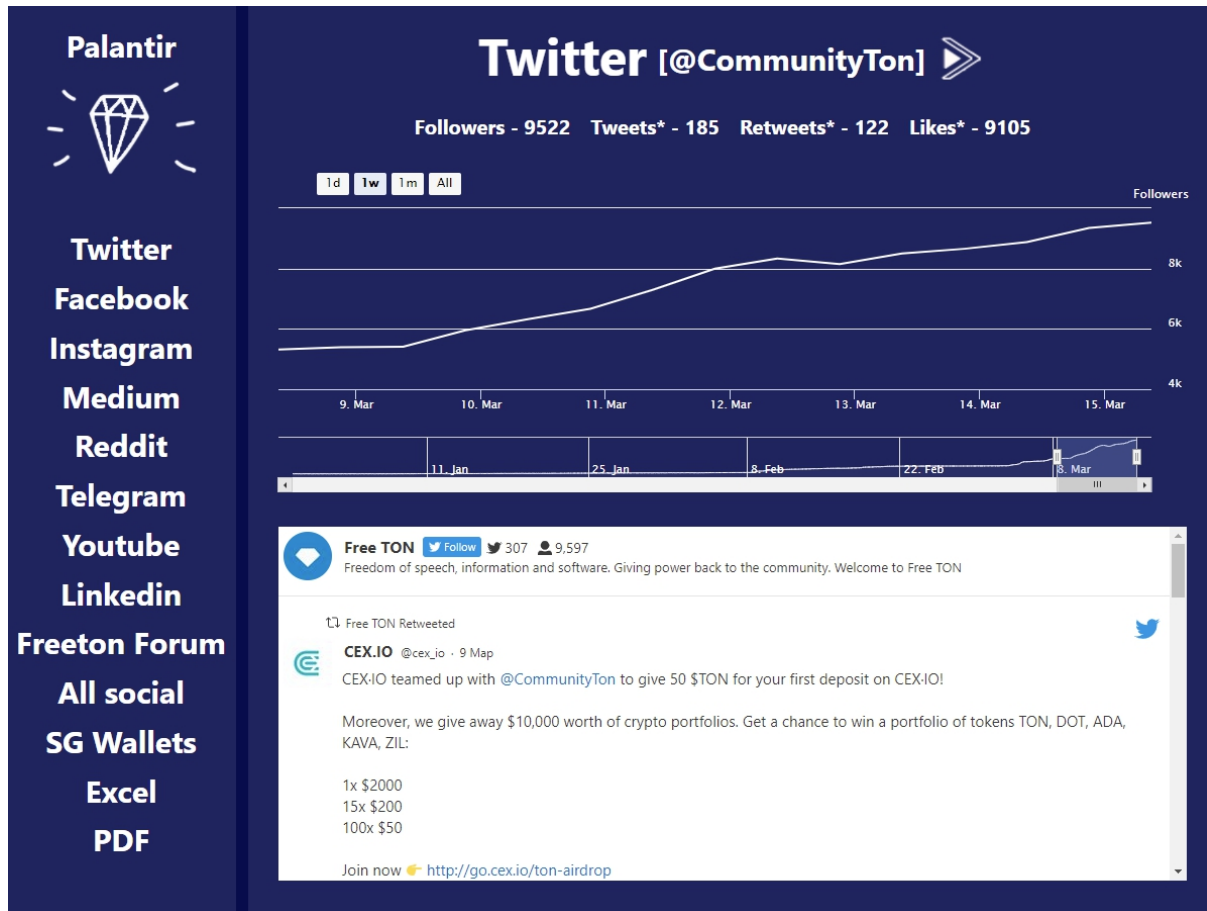

DATA PARSING:

All the data represented on **freeton.bar** website: number of followers in groups, channels, pages, communities as well as number of posts, likes, shares and so on is being parsed twice a day. Thus the information in tables, charts and Google Tables is being updated twice a day as well. The administrator can configure the frequency of data parsing if needed.

Note: For the jurors' convenience we will describe everything you can find on any page from the top to the bottom.

PAGES
The Homepage

At the homepage there is a table displaying the table with information on all social networks. The columns contain the number of participants in groups and channels for intervals of **1 day, 1 week, 1 month and 6 months.**

With the help of this table, each person will be able to assess the dynamics of the project development over time. As the statistical information accumulates, longer time intervals will be added to this table, such as a year, one and a half, two years.
