

Greetings to all!

My name is Andrey Nedobylsky, and this is my submission for a vacant position on the Free TON Dev Experience sub gov. jury.

I am CTO of [SVOI.dev](https://svoi.dev) development labs. Our team has extensive experience in working not only with classic products, but also with distributed systems including blockchain.

In the past, I have been actively involved in and led the development of blockchain platform IZZZIO (<https://github.com/lzzzio/izzzio>). Within the framework of this platform, I have developed a product similar in technical characteristics and principles to FreeTON. I'm sure I can be useful as a developer and jury for a project, as I see a lack of developer-friendly tools and documentation.

Also in the past I participated in the following projects:

- Bridges between different blockchain platforms
- Safe cross-blockchain interactions
- Blockchain-connected IoT and hardware
- Integration of crypto-providers for Russian Federal Security Service
- Blockchain game developing
- Blockchain DeFi systems developing
- Developing new consensus algorithms

and others.

At the moment, my team and I independently work on the developer tools for FreeTON. We also prepare documents for technical proposals of a different type of token (analog of TIP-3) and financial systems.

For example as part of the development of new functionality for FreeTON, we in SVOI.dev labs faced the problem of starting an dev environment for Solidity contracts. One of the temporary solution that we have already tried inside the team is the Telegram Bot, which compiles a Solidity contract on an already configured development environment, and also generates related files.

More info you can find at the

<https://forum.freeton.org/t/useful-tool-freeton-developer-helper-bot/4479>.

My main technology stack:

- JavaScript
- Node.js
- Ethereum + Solidity
- MongoDB
- MySQL, PostgreSQL, SQLite
- Elasticsearch + Sphinx
- Linux :)

The Jury groups I want to join (all of the proposed) - SDK Contests, Toolchain, Contests, Node Contests, Smart Contract.
