

To your attention, I would like to introduce my Virtual Hero/Spokesperson of Free TON, his name is **Free TON Spirit**, he is decentralized as possible because he is the collective voice of the community.

Sketch

Original

Night mode

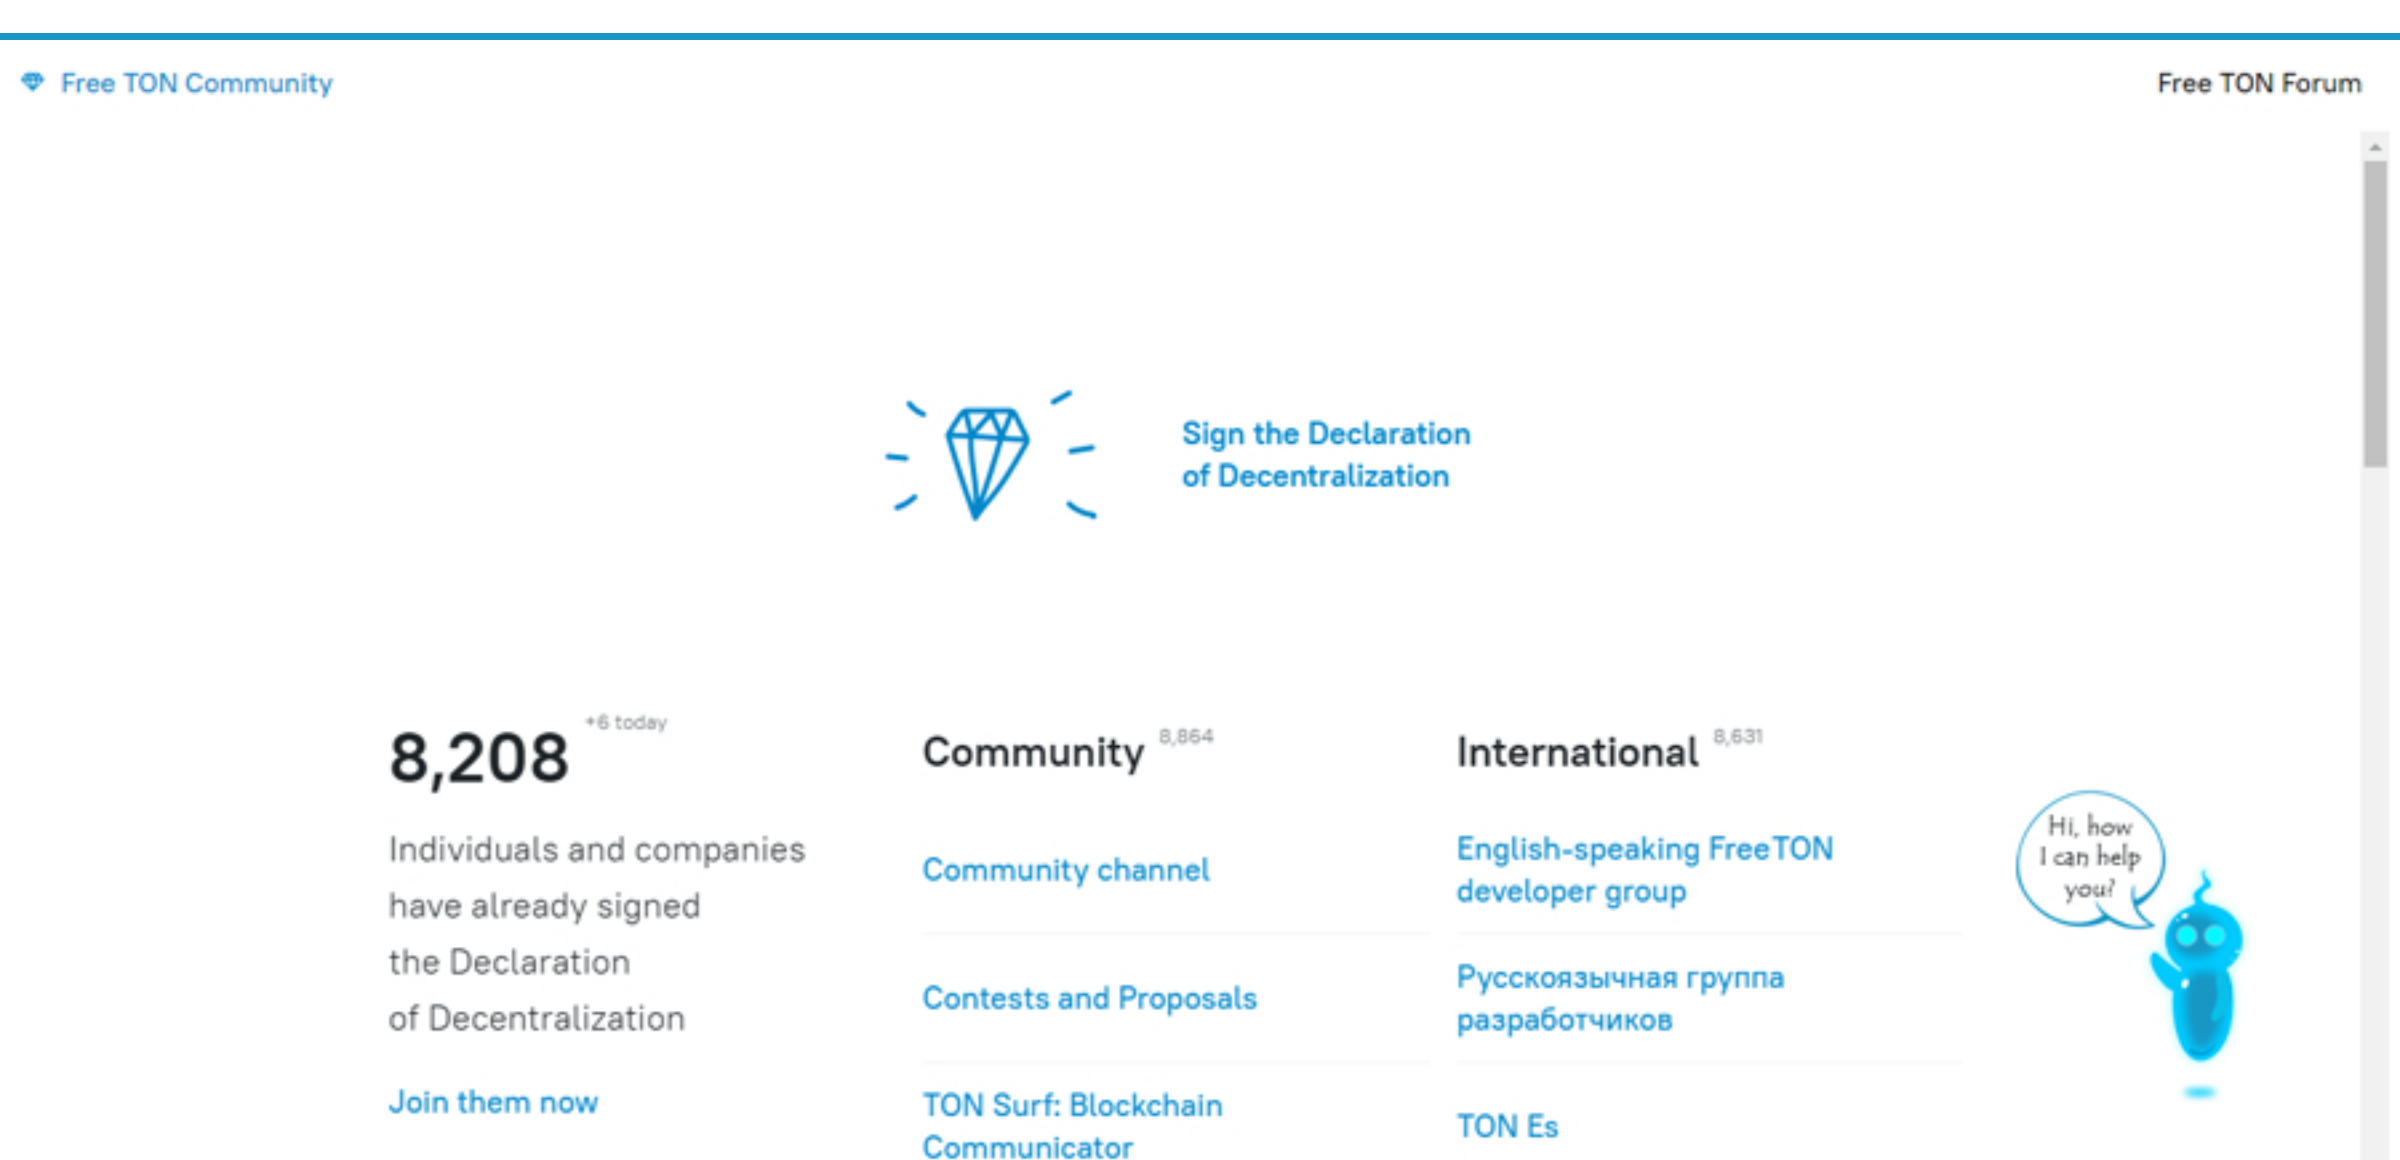

External Characteristics of Free TON Spirit: character blue color, because it is the color of the project, has a glow soaring in the air, looks like a small, cute and technological genie.

Characteristics of Free TON Spirit: very emotional, has a large emotion specter, charismatic, mainly it is always joyful, welcoming. Also has a good sense of humor and can always cheer up the Free TON user with a good joke. I created 3 emotions, this is greeting, joy and questioning, I plan to do much more if my character will be approved.

Role in the Free TON community (Philosophy): Spirit will announce news, help in a live chat on <https://freeton.org/> with information of the project and just talk about different topics. Can be used for stickers as well. The spirit will have an AI integration and it will be animated.

Example

Community Governance I think that it is possible to choose clothes for spirit if you want, but it is not necessary.

Background story The character was born with Free TON, Spirit itself is young as a project and very technological, a part of every member of the community and the project is in this character.

Technology Roadmap of this character will help community members to navigate the Free TON ecosystem, and the AI can also remember cool phrases from the community and use them, that way becoming the voice of the community.
