A little description

My design is based on a raw, initial version of the freeton.org, already loved by everyone. The site layout consisted of three columns of information, I redesigned and improved the layout, added new elements, new information and new icons. I also added starting key points that were required by the competition.

I hope you enjoy the new design which is a continuation of the old one.

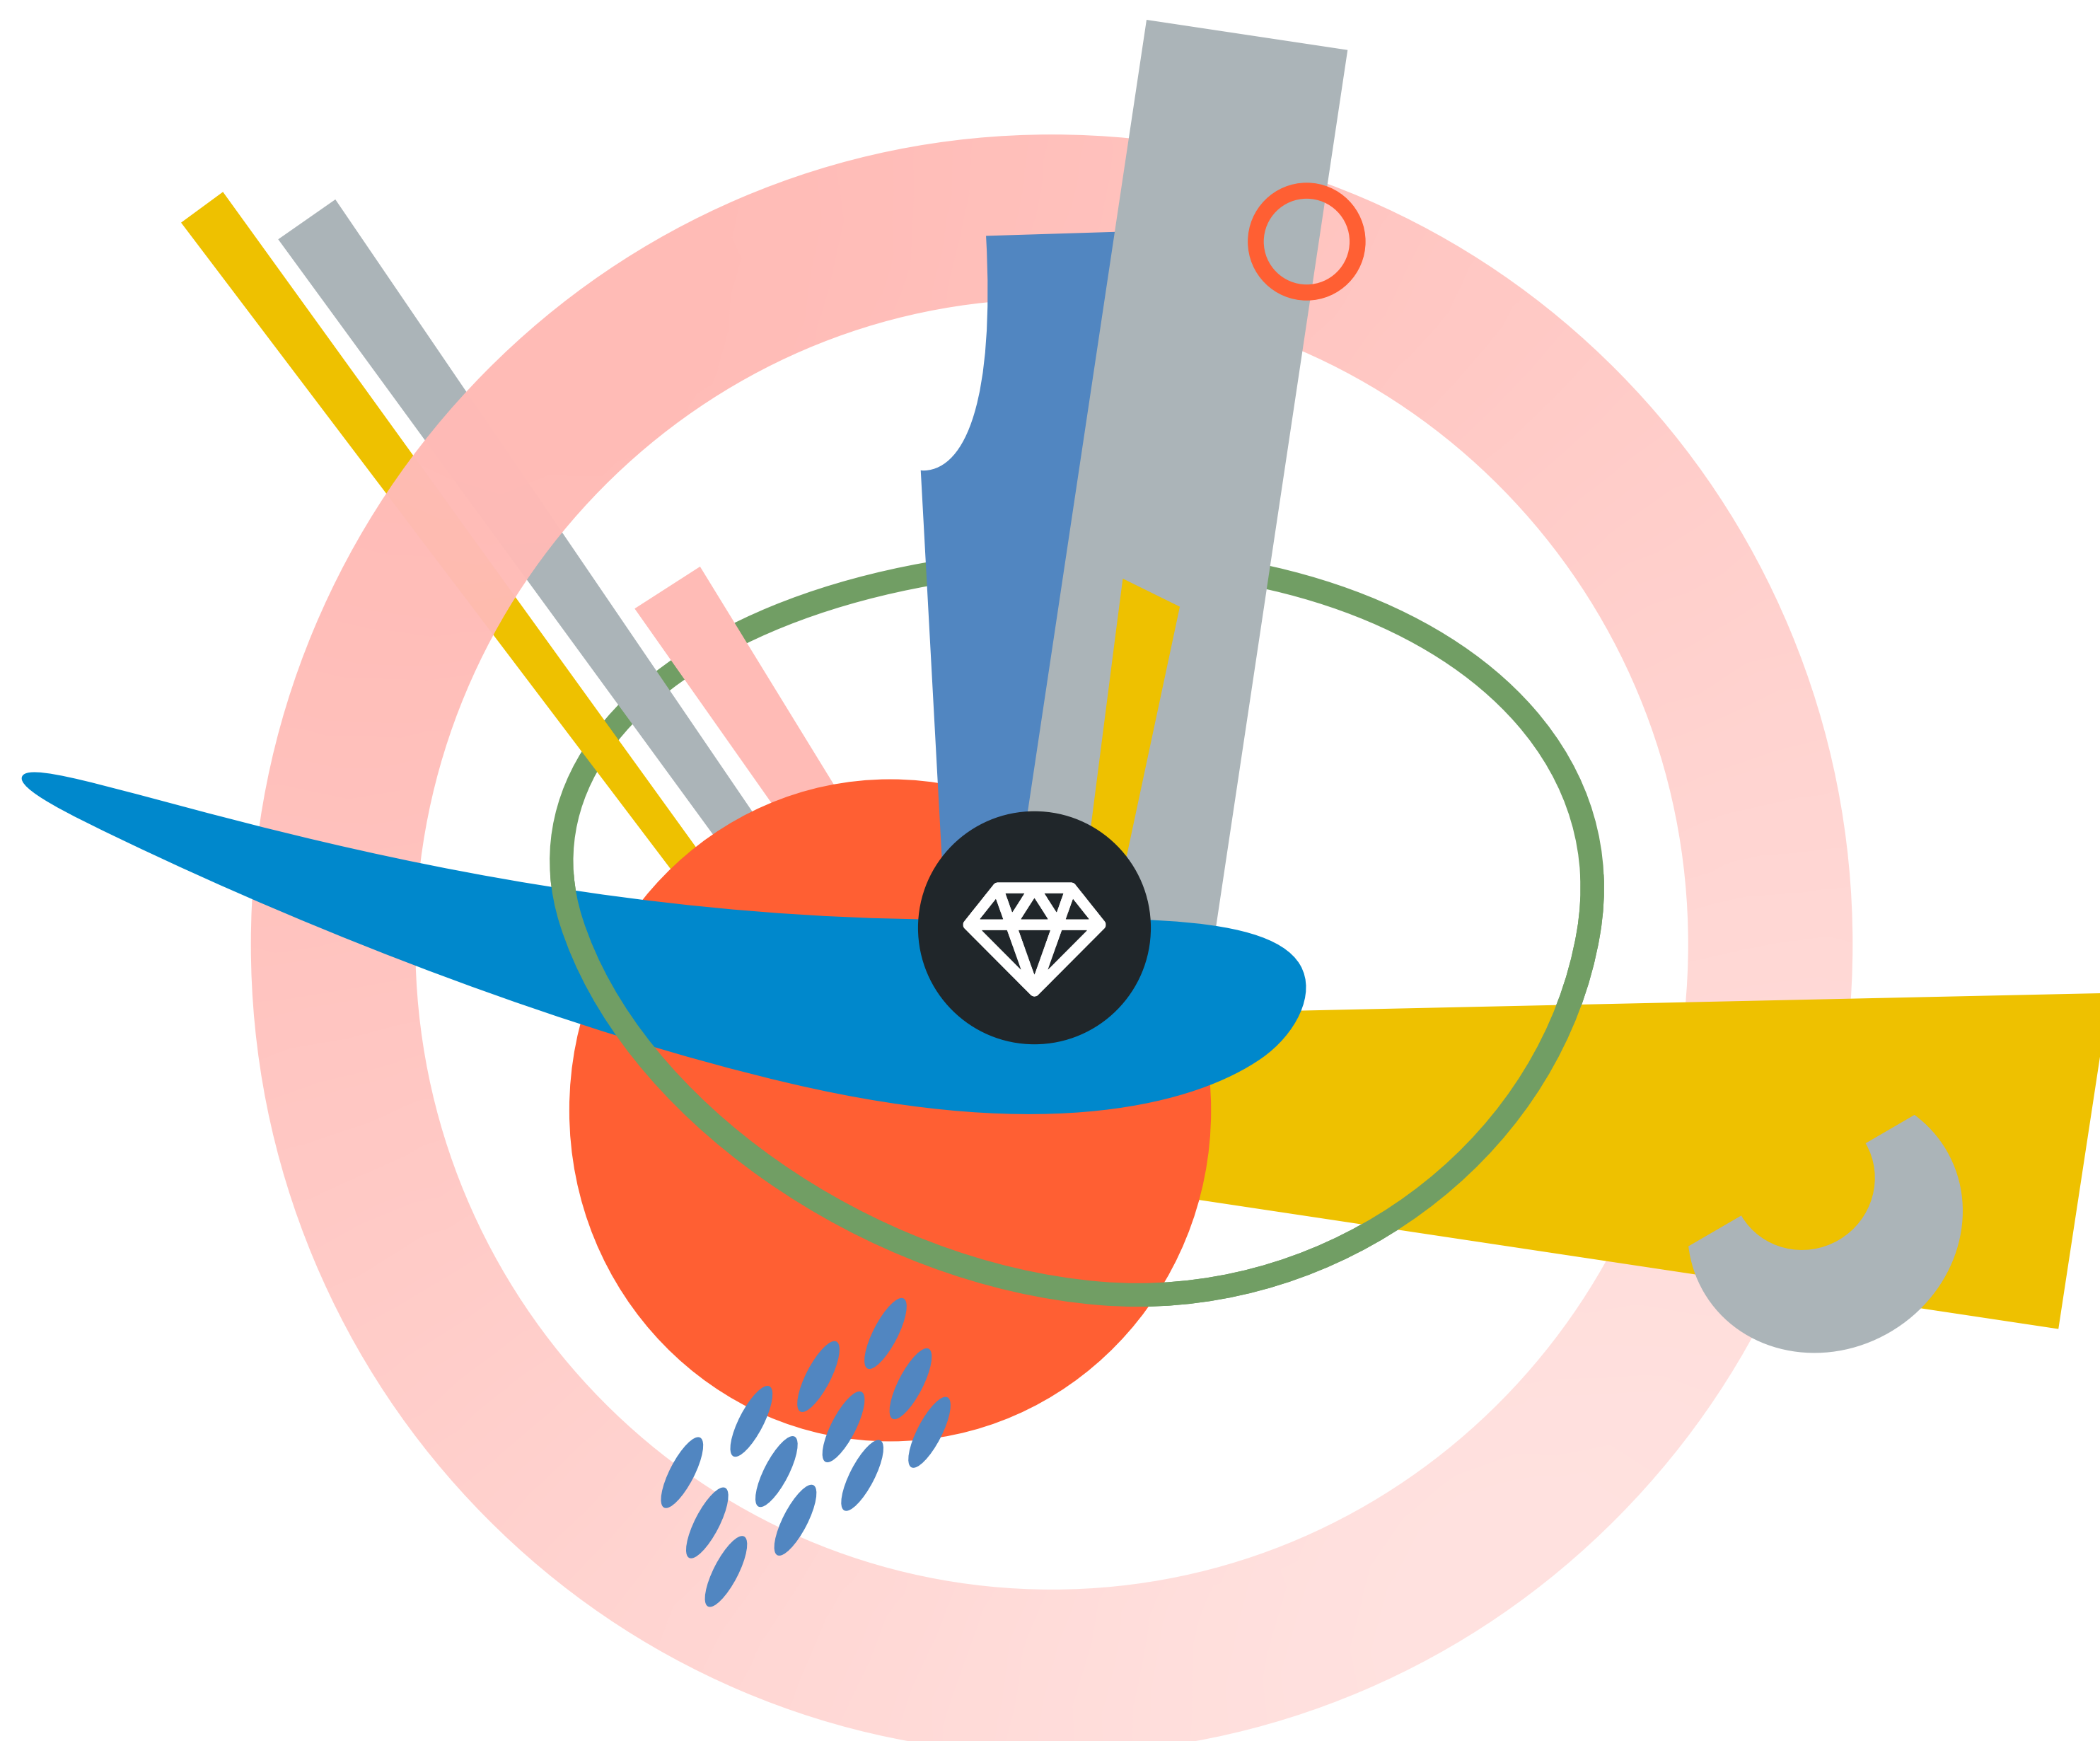

Join free internet with FREE TON

"We must be free not because we claim freedom, but because we practice it."
- William Faulkner

Free TON is a next-gen blockchain that belongs to no one and to everyone at the same time. The network does not have an owner or centralized management that decides what should be done or when, nor what tools or projects should run on it.

The unique, modern multi-tier blockchain architecture used as the foundation of the Free TON network allows its ecosystem to potentially become a viable alternative to the traditional centralized network we currently use.

Who is Free TON

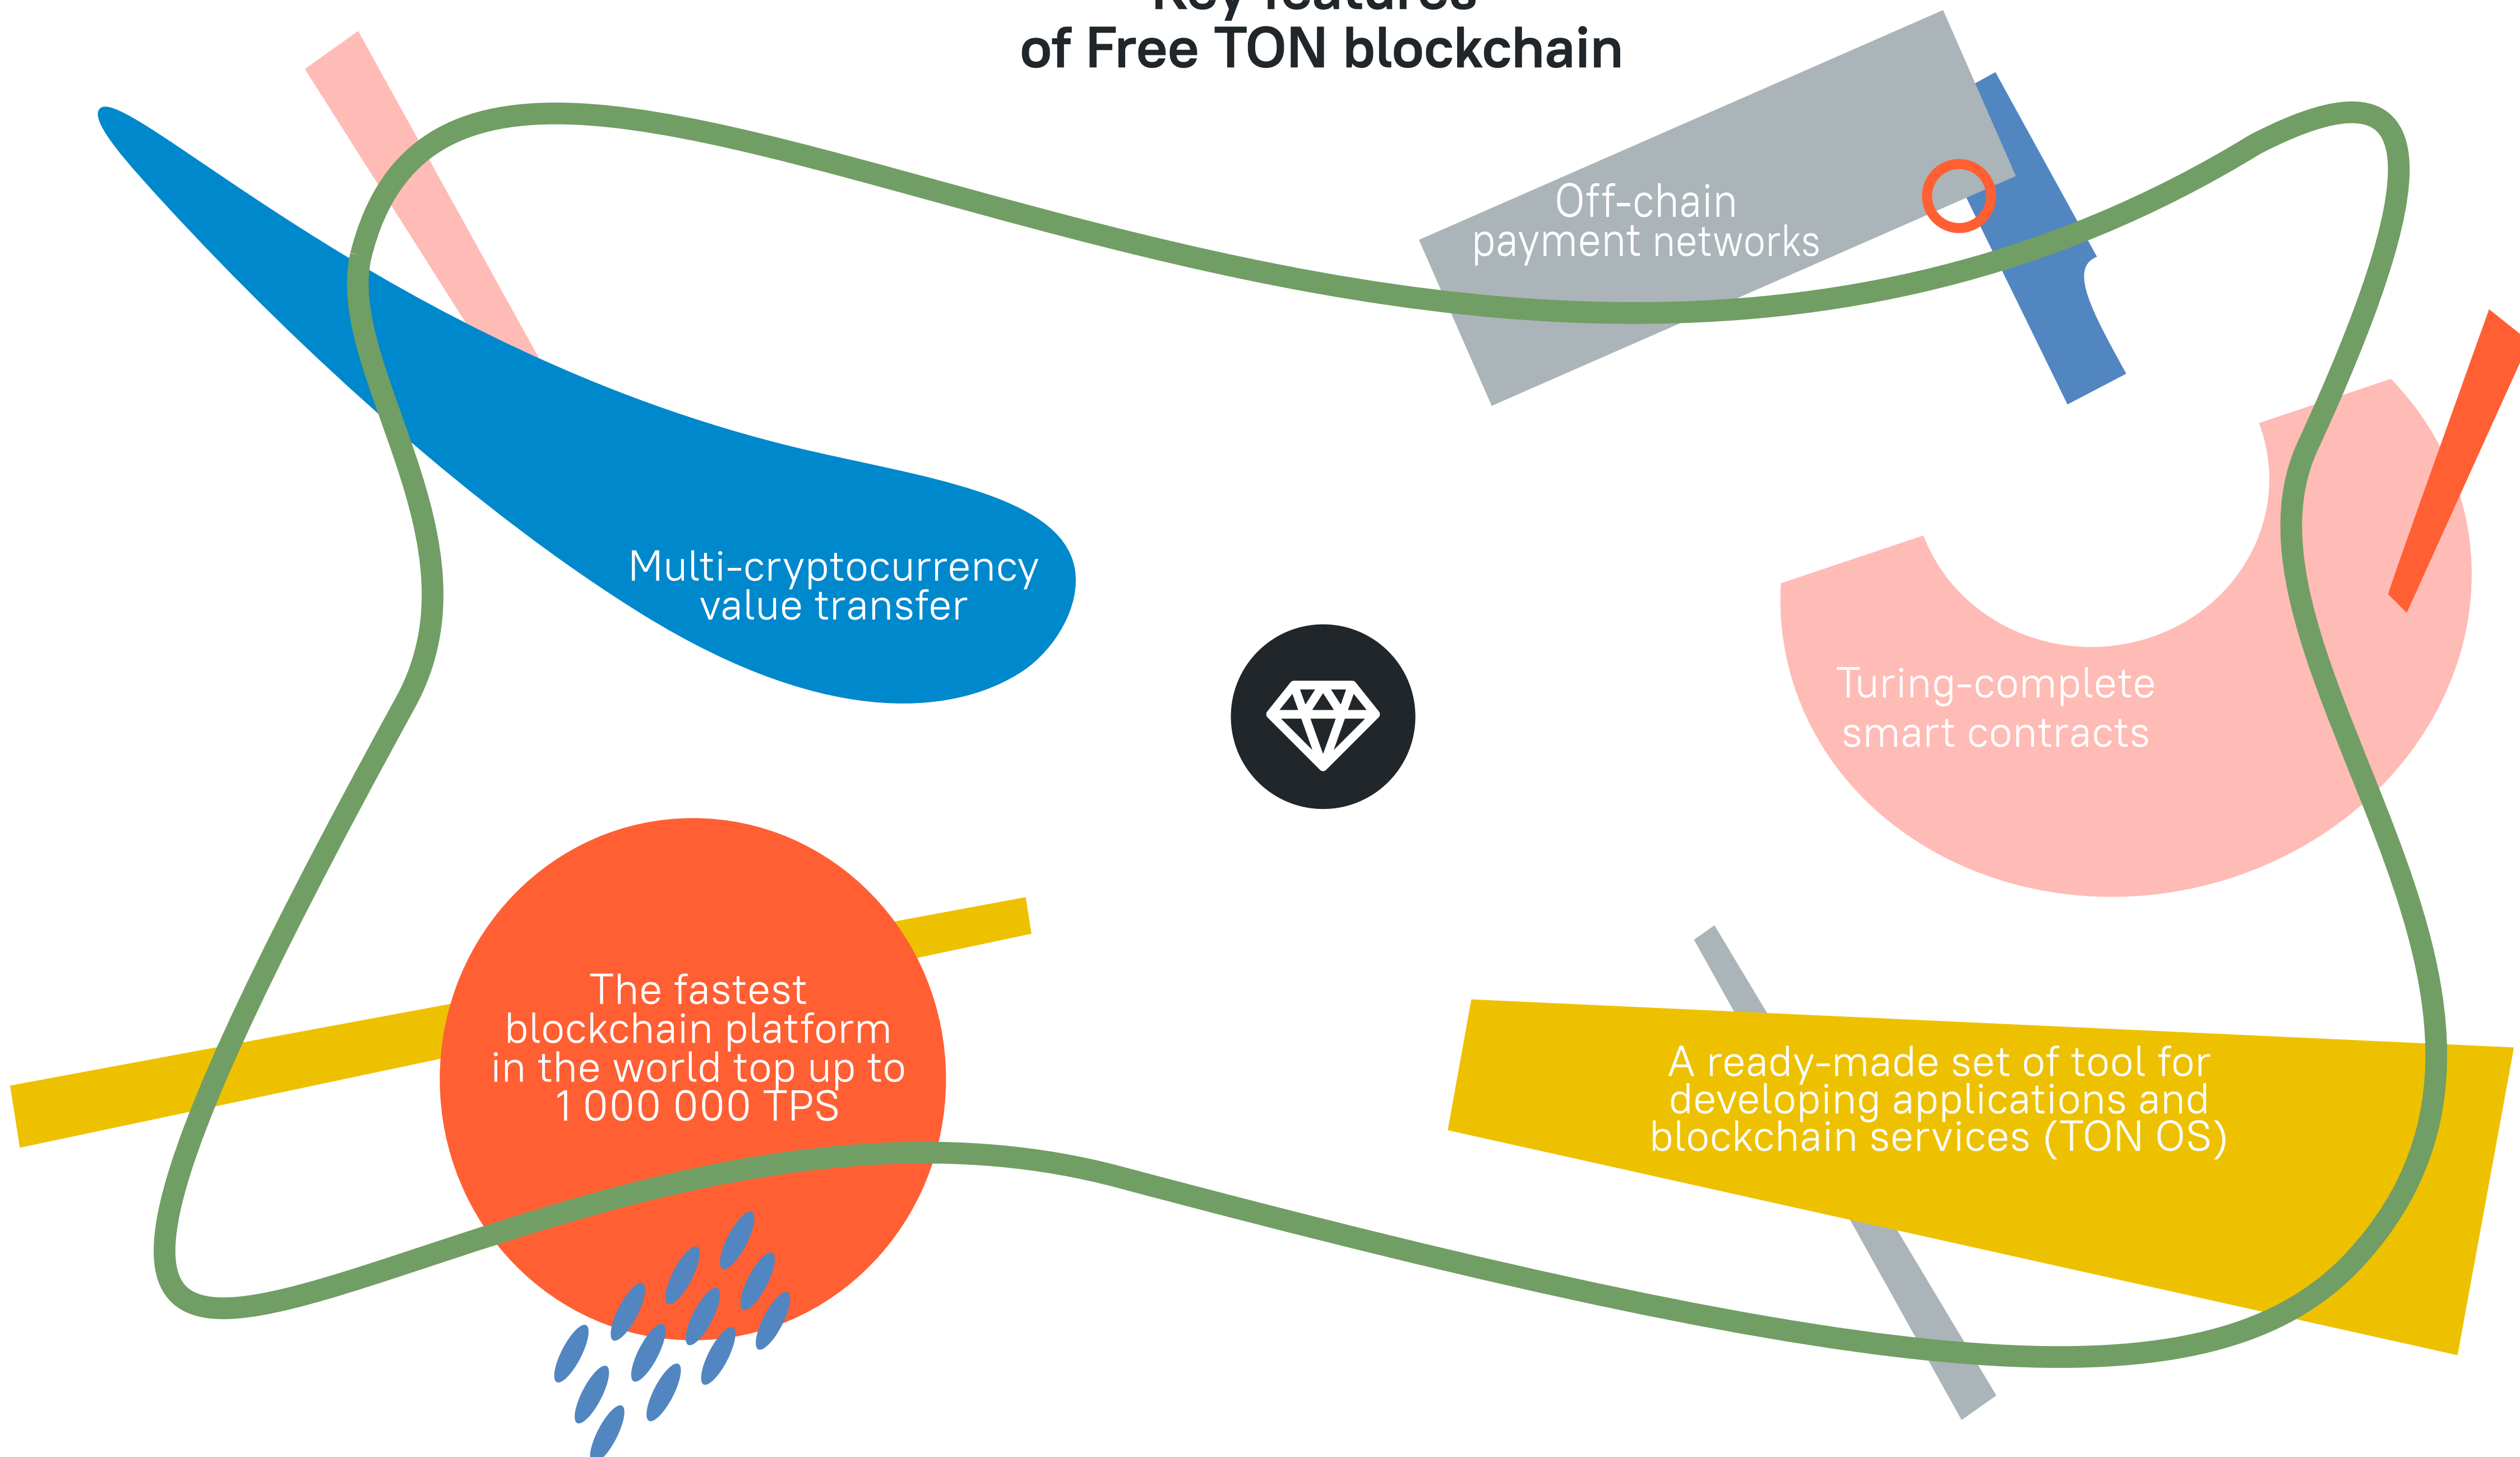

Free TON was born free from day one through decentralized governance in its DNA. Launched by many as part of a community effort, it became more and more decentralized every day ever since.

From inception, the community has been committed toward stratifying its decentralization through what is coined stratified governance, including sub-governance groups with specific self-appointed tasks taken on by active members who then bring something to the network to make it better and grow.
