

*We can help your business respond to the COVID-19 risk...*

## Infectious Control Cleaning

### Pro-active and reactive solutions

In response to COVID-19, Tradeflex are offering a range of additional services to its clients to increase the level of cleaning being performed on their premises.

The information set out below is based on the most up-to-date advice from the Australian Government's Department of Health & Services and suppliers of disinfectants and cleaning products. In accordance with DOHS, our staff are trained and experienced in all facets of COVID-19 decontamination and equipped with state-of-the-art equipment.

#### Prevention Cleaning

It is important to remember that until you have been told that there has been a confirmed case of COVID-19 in the building, cleaning and disinfecting are purely preventative measures.

The aim of preventative cleaning is to **clean High Touch Point's (HTPs)** frequently and diligently to:

- remove viruses that may be present, and
- remove the organic matter that can enable viruses on the surface to live longer.

Disinfection cleaning will then kill any viruses which remain on those surfaces.

Tradeflex can also provide cleaning services to your sites during a prolonged shut down period, to assist in maintaining your facility.

#### Decontamination Cleaning (Full Infectious Clean)

Following a confirmed case of COVID-19 in a building, Tradeflex will carry out a **full infectious clean** of the areas and rooms that have been potentially contaminated, including:

- a full clean and disinfection of all potentially contaminated (touched) surfaces, not just High Touch Points.

Cross-contamination is likely to be reduced significantly if staff do not return for 72 hours following a decontamination clean.

## It's all about people's health and wellbeing

- ✓ Being pro-active about cleanliness is the best approach to protect the health of your staff and customers.
- ✓ Additional cleaning in a working environment demonstrates your commitment to the wellbeing of your employees.
- ✓ Thoroughly cleaning and disinfecting frequently touched surfaces is a vitally important part of preventing the spread of COVID-19 and keeping us all healthy.

### Cleaning Process

- 1. Supply** *Cleaning products, tools and PPE.*
- 2. Prepare** *Preparing workers, worksites. Assess clients' risk & priorities.*
- 3. Clean** *Step-by-step cleaning and disinfecting method.*
- 4. Maintain** *Guidelines about processes at the end of the shift, maintain cleaning supplies & disposal of contaminated waste.*
- 5. Check** *Robust cleaning audit, reporting and control practices.*

### Preparing an Action Plan for your Workplace

Tradeflex is prepared to respond quickly to any request for preventative or decontamination cleaning services.

Our management team will conduct a [risk assessment](#) and determine what type of clean you may require at your site.

All cleaning staff are [extensively trained in infectious and HTP cleaning procedures](#), in particular, use of chemicals, use of specialised equipment, methods which prevent cross-contamination and appropriate PPE requirements.

We will work with you to ensure you are provided with important details regarding our cleaning services, which may include information such as the following:

- type of clean required;
- instructions to you and your team in preparation for the scheduled clean;
- full quotation;
- detailed scope;
- confirmation of a response time;
- estimated timeframe to complete the services; and
- a report upon completion to confirm types of chemicals used on-site and when staff may return.

### Be prepared | request a quotation

Find out the potential cost of a **Prevention Clean**, or a **Full Infectious Clean** should a COVID-19 outbreak occur within your organisation.

We can provide further information to you, to ensure you have an Action Plan ready for your workplace.
