INTRODUCTION

4U Spinal Fixation System is designed to provide immobilization and stabilization as spinal segments as an adjunct to fusion of the cervical, thoracic, lumbar and/or sacral spine.

4U Trauma System is built to replace or support a lost joint or a damaged bone. **4U** Systems are used for the treatment, the stabilization and defects on the spine and joint or other skeletal structures.

4U Spinal Fixation Systems are the next generation in top-loading, top-tightening systems that support a spine and skeleton for optimal deformity correction. Deformity correction requires a comprehensive selection of implants and well designed instruments.

Thus **4U** Spinal Fixation Systems have a wide and high quality series of implants that support anterior & posterior corrective techniques.

It consists of surgically long-term use and implantable devices, different sizes of polyaxial self-tapping pedicle screws, trauma plates&screws, rods in symmetric, bilateral arrangement and setscrews for rod connection.

4U Spinal Fixation Systems are created in sufficient range and specifications.
