

WHAT IS IT?

An Integrated Campus Plan (ICP) is a top-level plan that guides the physical development needed to support the mission and strategic plan of an institution of higher education. Integrated planning engages every part of the university to work together toward a common vison. UNM has initiated its ICP that will replace the 2009 Master Plan; it will address all UNM properties and guide the University's decisions on the physical environment, including the character of each campus, safety, access, mobility, and sustainability.

KEY OUTCOMES

The ICP will focus on providing a "road map" to guide future development of UNM's various campus landholdings and serve as a guide to facilitate decision-making around UNM's physical assets. The plan will focus on the following key elements:

STRATEGIC NEEDS + PROGRAM DEMAND

UNM's 2040 Vision serves as the driving document for the planning effort. It will serve as the basis for determining programmatic needs and priorities and how the campus plan can manifest those strategies in physical form.

FACILITIES

The plan will consider the highest and best use for the campuses' facilities. Analysis will consider deferred maintenance, building suitability, and programmatic fit.

CAMPUS SYSTEMS

The plan will take a holistic and systems-based approach to planning that considers the integration of various physical assets including open space, mobility networks, infrastructure, and sustainability.

WHO IS FACILITATING?

The project team is being led by members of **UNM's Planning, Design & Construction** team with collaboration from **Sasaki Associates**, an international planning and design firm. The planning team also includes **mobility specialists** from **Walker Consulting**, and **wayfinding experts** from **Studio Ummo**, and Albuquerque-based planning and landscape architecture firm, **MRWM Landscape Architects**.

The Project Team will actively engage stakeholders from across the university, including university leadership from UNM's various campuses, students, faculty, staff, and community members.

TIMELINE + PLANNING PROCESS

The ICP will be conducted over a **fifteen-month process**, which began in Sept. 2022 and is expected to conclude in Nov. 2023. The plan involves the following three phases:

- > Phase 1: Discovery and Analysis | Sept.—Dec. 2022
- **D** Phase 2: Development and Drafting of the Plan | Jan.-July 2023
- > Phase 3: Implementation | Aug.-Nov. 2023

The planning process will be highly participatory, with a range of synchronous and asynchronous touchpoints throughout the process. The consultant team will be collecting feedback in Phase 1 by using a custom interactive map-based survey as well as by conducting several stakeholder listening sessions. Phases 2 and 3 will involve hands-on opportunities for feedback, including open house-style town halls.
