Instruction:1

Import the project into your Android studio.

To import the code into your Android studio do the following steps:

- i)Unzip the Project File
- ii)Open Android Studio exe
- iii)Click on Open an Existing Project on Android Studio
- iv)Select our Android Project

[In Android Studio Opening dialog, when you choose the option "Open an Existing Project" ,You have to put the path of project root path. Then Select our project file ... See Examples]

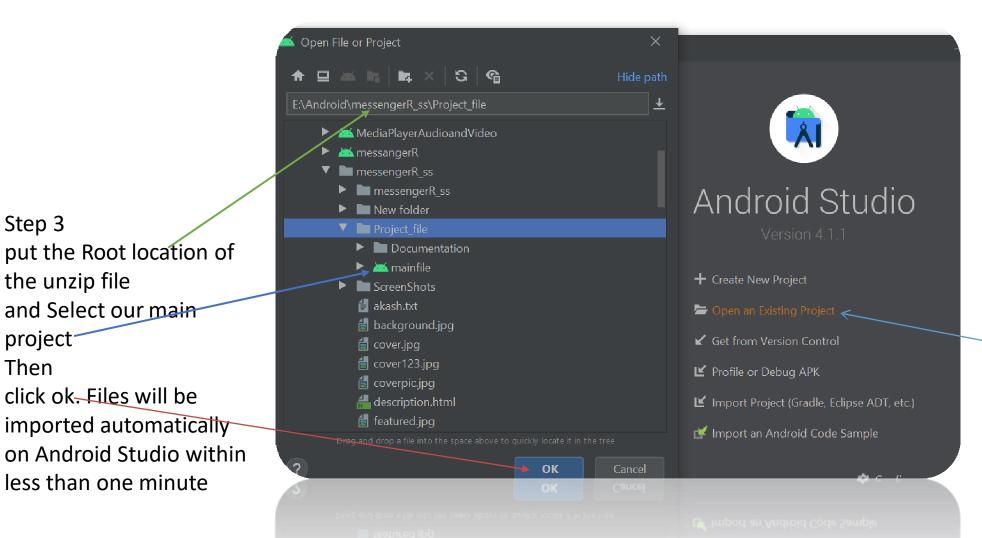

Examples

Step 3

project

Then

step1 Unzip the Project file

Step 2

After Open Android Studio Click on Open an Existing Project

Instruction 2:

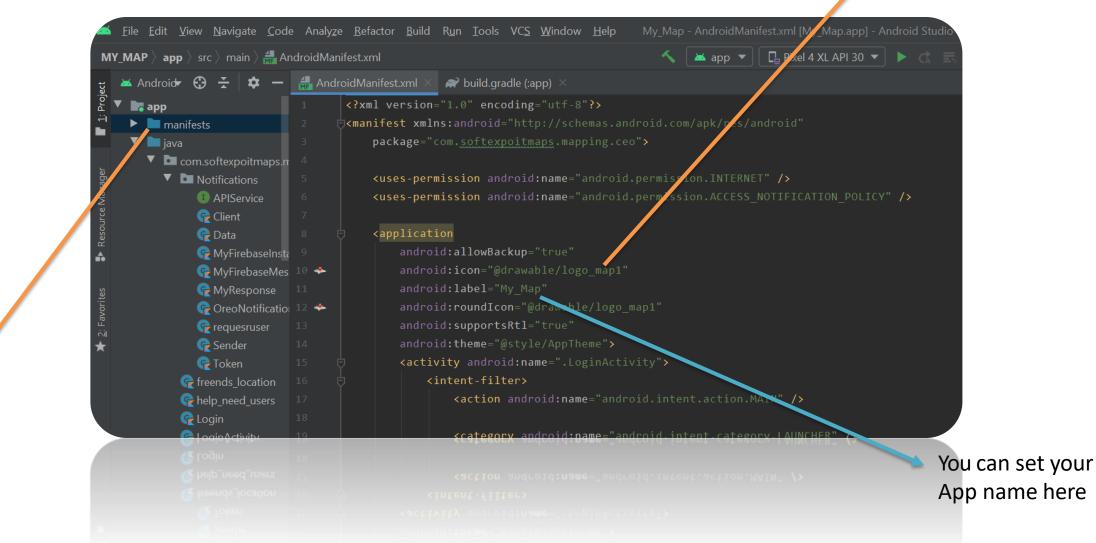

Changing the basics of project like app name, package name, icon, color, ui designs as you preferences...

=>You can use ours also but you have to change package name must for creating your own network....

- ⇒You can change the app_name and icon from manifest file…if you want to change colors and ui designs, just go to XML files and change these…
- \Rightarrow import your designs at drawable folder and set these designs from xml
- File...Our Designs are open source...You can also use these.

Samplaes

Import your icon in drawable folder and set your app icon here

Step 1 Go to manifests file

	<u>F</u> ile <u>E</u> dit	<u>V</u> iew <u>N</u> avigate	<u>C</u> ode Anal	y <u>z</u> e <u>R</u> efactor	<u>B</u> uild R <u>u</u>	n <u>T</u> ools	VC <u>S</u>	
M	Y_MAP 〉 app	o 👌 🛹 build.grad	dle					
1: Project	🔺 Android 🔻 🖿	▼ drawable add.png (v24 委 backk.xml (v2				⊕ ·	¥ ¢	
Resource Manager		Image: state stat	nl (v24) xml .xml 2.xml 21.xml 22.xml (v24)					
🐺 2: Favorites		buttonround custom_rour fb.png (v24) gym.xml hospital.xml hotel.xml chotel.xml c_baseline_re	ided_corners.x efresh_24.xml earch_24.xml					
🗼 Build Variants		ic_launcher_b ic_launcher_f icon.png (v2- icon_map.pn is.xml	oreground.xm 4) g (v24)					
 Z: Structure 		 insta.png (v2 logo_map.pr logo_map1.p logo_maps_t logo_maps_r logo_maps_r 	ng (v24) ong (v24) oackground.xn					

This is our Drawable Folder. You can copy your image and just paste it here in Drawable Folder. The image will be imported Automatically. Then Go to xml files and you can set your Designs there. Icons are also imported here in Drawable File

You can Replace our photo with your selected photo with the same name. EX: Our landing page's image name is bg.jpg... You can copy your photo And paste it into drawable folder then delete our bg.jpg picture and rename your photo as bg.jpg ...Your app's landing image will be changed and set with your picture...take a look on our drawable folder...

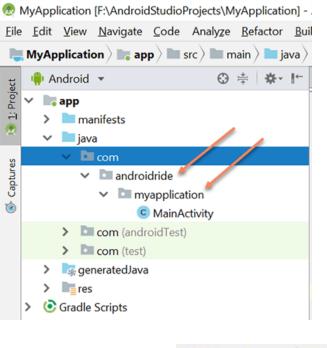

Methods To Change Or Rename Android App Package Name in Android Studio

In this example, we will change package

name com.androidride.myapplication" to "com.xyz.yourapplication".

Marine Antivity > and Constant

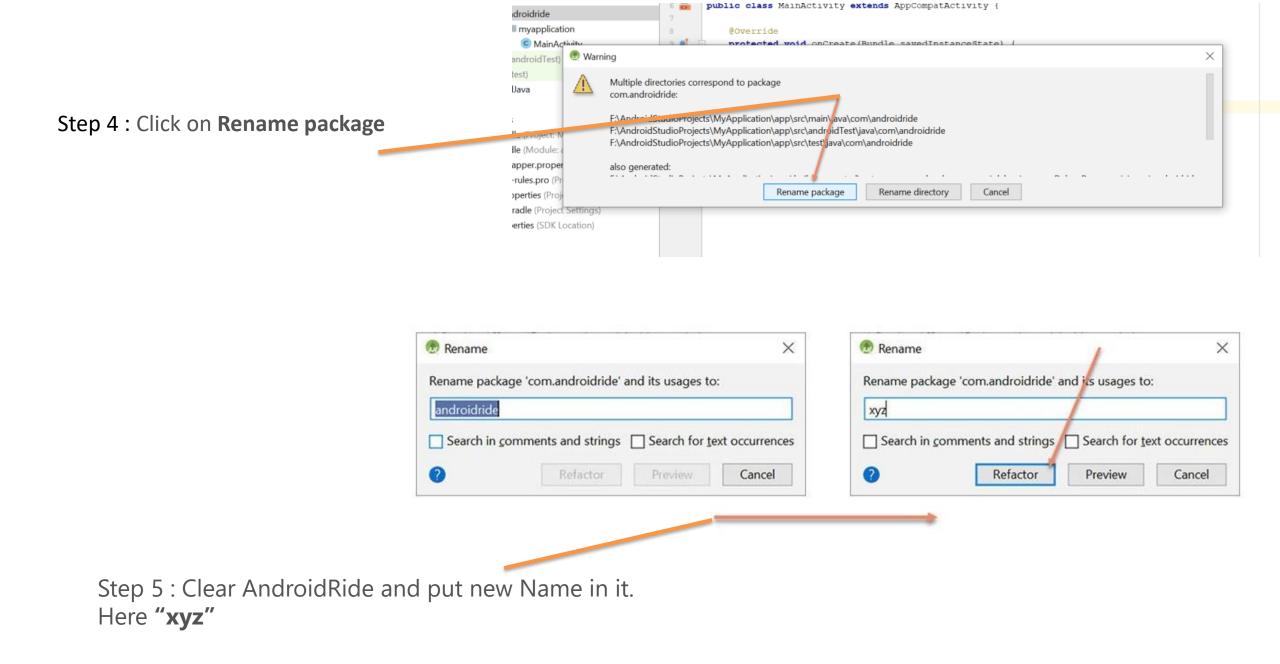

MyApplication [F:\AndroidStudioProjects\MyApplication] - ...\ap File Edit View Navigate Code Analyze Refactor Build I Step 1: Open Android Studio project, Select package MyApplication > 📷 app > 🖿 src > 🖿 android Test > 🖿 java name or Java, Click the gear icon. Android 🔻 0 1 Project V app app -1manifests > iava > 🛅 com.androidride.myapplication Captures com.androidride.myapplication (androidTest) > com.androidride.myapplication (test) > generatedJava MyApplication > app > src > test > in java > 5 8 It activity main york res 🛑 Android 🔻 MainActivity.java Flatten Packages 🗸 📑 app Gradle Scripts droidride.myapplication; Hide Empty Middle Packages > manifests Show Members iava Autoscroll to Source ✓ Image: v com.androidride.myapplication ainActivity extends AppCompatActivity { Autoscroll from Source C MainActivity Sort by Type Com.androidride.myapplication (and and a com.androidride.myapplication) ✓ Folders Always on Top > androidride.myapplication (test void onCreate(Bundle savedInstanceState) { Step 2: Deselect Compact Middle Packages. This onCreate(savedInstanceState); > is generated Java ✓ Pinned Mode tentView(R.layout.activity main); > res ✓ Docked Mode breaks your folder structure into parts. Gradle Scripts Floating Mode Windowed Mode Split Mode Remove from Sidebar ✓ Group Tabs Move to Ň Resize

The package is broken down.

Step 3 : Right Click on AndroidRide, **Refactor -> Rename** . You can also use **Shift + F6**.

strings, non-code files and generated code

Step:7

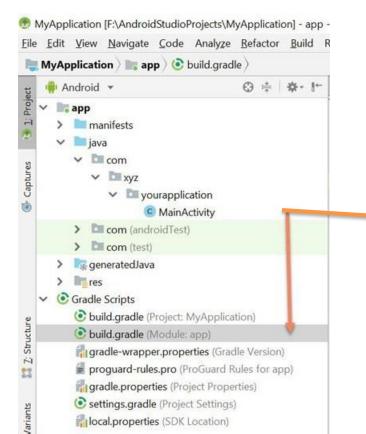

•Repeat the same process.

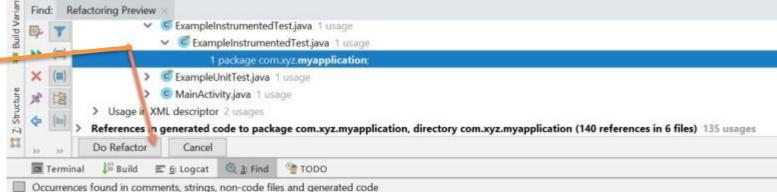

•Right click on **myapplication**,Refactor -> Rename and Rename package.

Step 8: Change myapplication to yourapplication

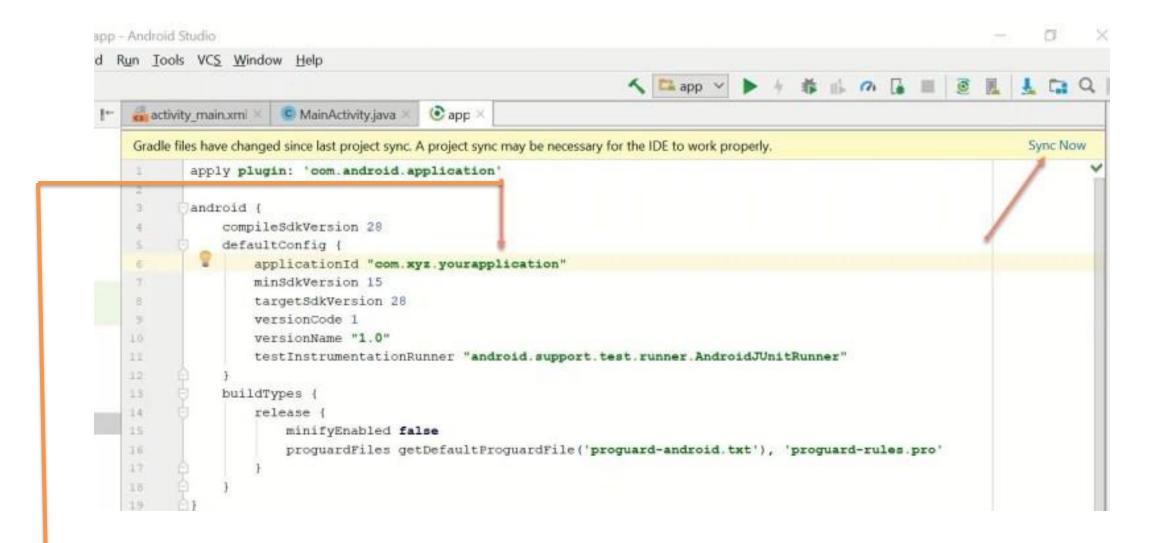

🕐 Rename			×	💮 Rename			×
Rename packa	ge 'com.xyz.myapplica	ition' and its usa	ages to:	Rename packag	ge 'com.xyz.myapplica	tion' and its usa	iges to:
Search in co	omments and strings	Search for to	ext occurrences	Search in co	mmen s and strings	Search for te	ext occurrences
0	Refactor	Preview	Cancel	0	Refactor	Preview	Cancel

Step 10: After changing the package name, open **build.gradle(module)** and change **Application Id**

change

applicationid "com.androidride.myapplication" to "com.xyz.yourapplication".

-After changing applicationid, click on **sync now**.

Congrats. Package name successfully changed.

Instruction 3:

This project is completely built for Use. If you want to create Your own Network, Just you have create an account on <u>https://console.firebase.google.com/ Click Here</u> and then create a project in It, Then, setup your android app inside that project ...For setup:

⇒After Opening the project and Click on add app Android icon option then give your package name and download the config file from firebase . Following firebase instructions delete our existing config file from the project and in that position paste your downloaded config file. That's it. You can find the location of our config file from the firebase's instruction . After Clicking Continue to console your network is Created Successfully....

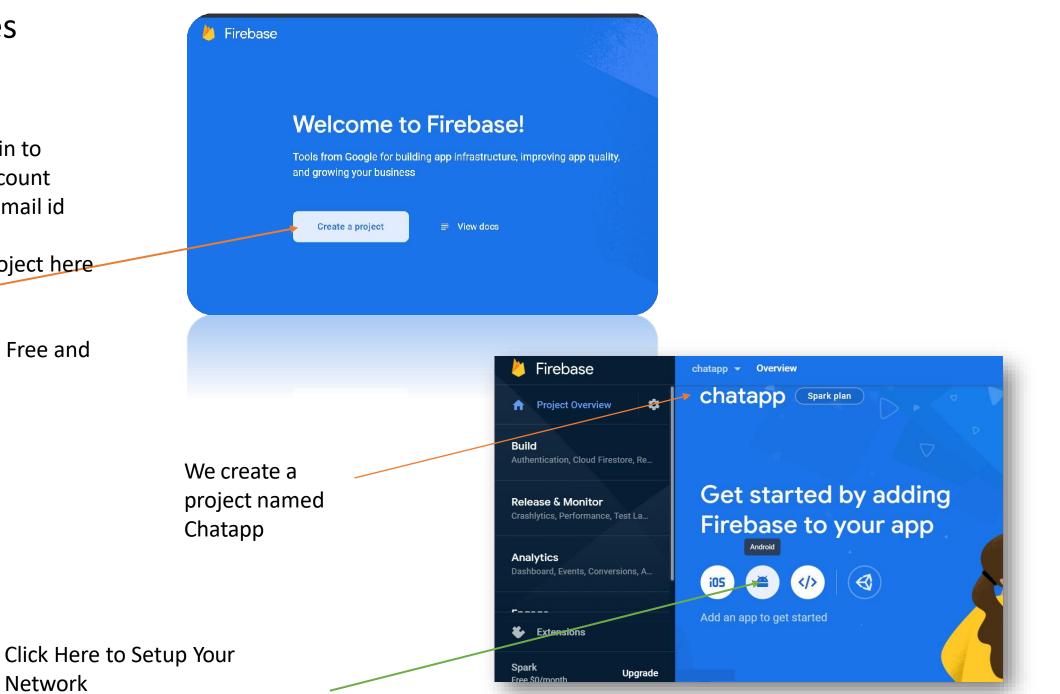

⇒For Push Notifications System go to Firebase's Project overview->Project Settings ->Cloud Messaging->copy the server key token and then go to our project file->java ->package name file->Notifications>APIService.java file ->"Authorization : key = 'paste the token here'" ...Your push

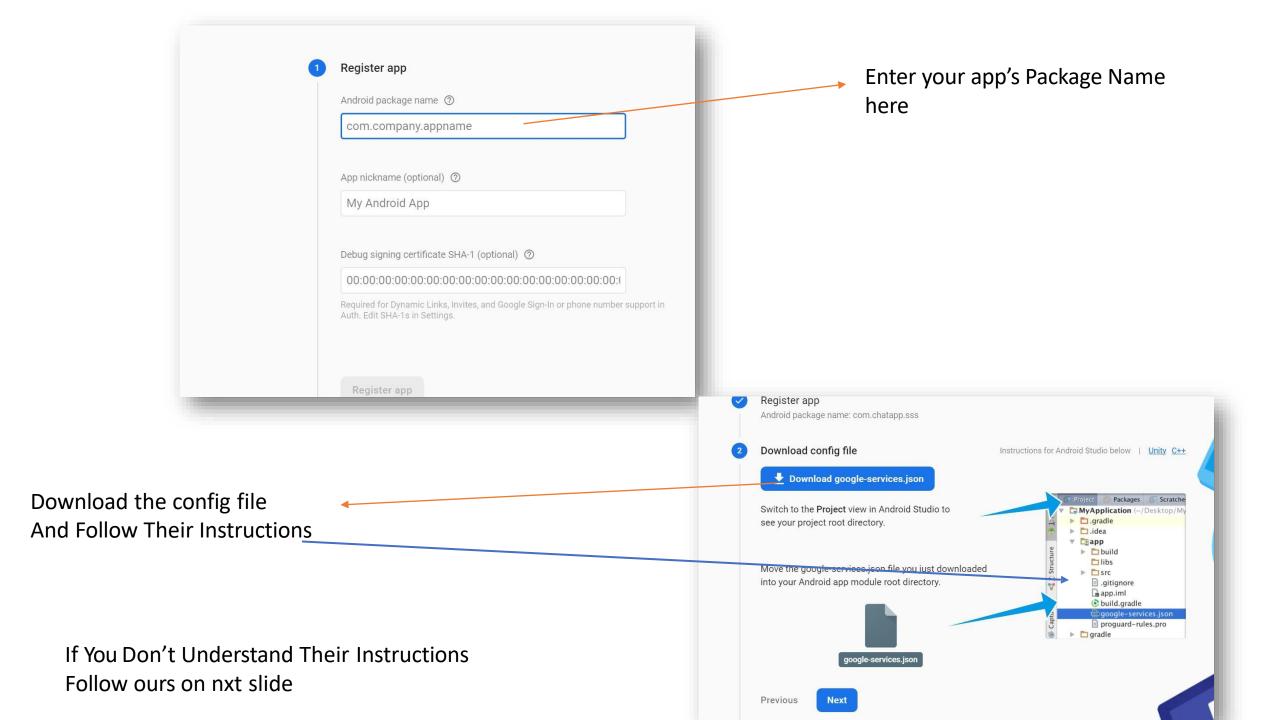

Notification Service is Build Completely...That's it. Network is Setup with Push Notifications

• Samples

You can login to firebase account with your email id Then, Create a Project here

Firebase is **Completely Free and Fast Server**

Change android to Project Here

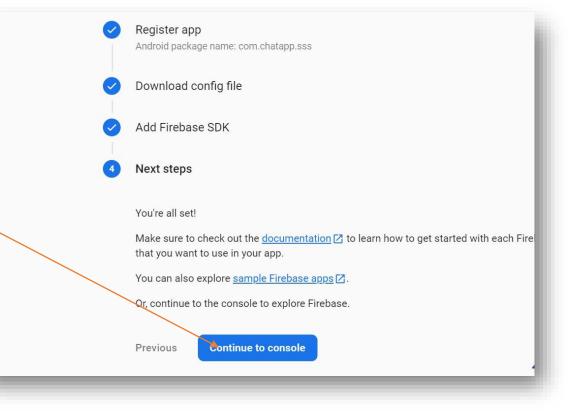

Delete our googleservices.json file from here And paste your new Copied services.json file

here At the same position

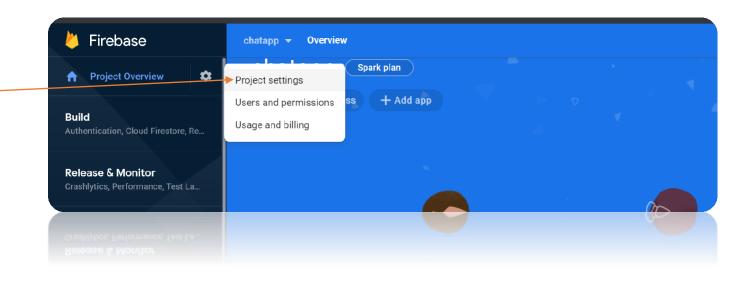

Be Careful It is most Important part
