

Sustained Attention - Textual (Intermediate)

The Sustained Attention - Textual dimension measures the candidate's abilities to closely follow textual contents over extended periods, maintain focus, and process information accurately.

50%

4

Below Average

The candidate's 'Sustained Attention - Textual' skills have been evaluated as 'below average'. This indicates that the candidate possesses partial abilities to follow long texts and maintain focus. The candidate may occasionally get distracted and tend to overlook some details.

Candidates with a below-average level of sustained attention-textual skills can generally follow and understand textual content, but they may face some difficulties in maintaining their attention over extended periods. This may include situations like overlooking some details, slowing down in fully processing the information, or experiencing distraction.

Candidates with below-average sustained attention-textual skills may need to make an effort to follow textual content and continually monitor their concentration. In jobs where working with long texts is required, they may experience fluctuations in their performance from time to time and may require additional effort and attention in certain situations.

For candidates with a below-average level of sustained attention-textual skills, it is essential to improve their abilities to sustain attention and focus. They may benefit from performing exercises to increase their attention using suitable methods, using effective note-taking and summarizing techniques, and encouraging active participation in the process of understanding textual content. In this way, they can further enhance their performance in tasks requiring work with extensive texts.
